

Theme3: C.Ecosystem Restoration and the Climate Emergency

[C1] How can we reduce the contribution of agriculture to climate change.

[C2] Sustainable and productive measure against soil erosion and land degradation, including in cold and wet climate with hilly terrain.

[C3] Harnessing the power of an ecosystem services approach at various scales, from the farm to the national scale.

[C4] Wastewater management and restoration of river systems.

[C5] Water Supply and sanitation – strategy and policy frameworks to support real action.

[C6] How can ecosystem restoration reduce the impact of climate change, disasters and extreme water events?

[C7] Managing trans-boundary waters for better local, national and regional outcomes. Aquatic and Terrestrial invasions and ecosystem services.

Action:

Innovation, Restoration, Management, Strategy, Policy, framework, field experiments
